Data Distribution Service (DDS): How to setup a Import/Export schedule

Summary

Let's show you how to setup a Import/Export schedule in the Data Distribution Service (DDS) module.
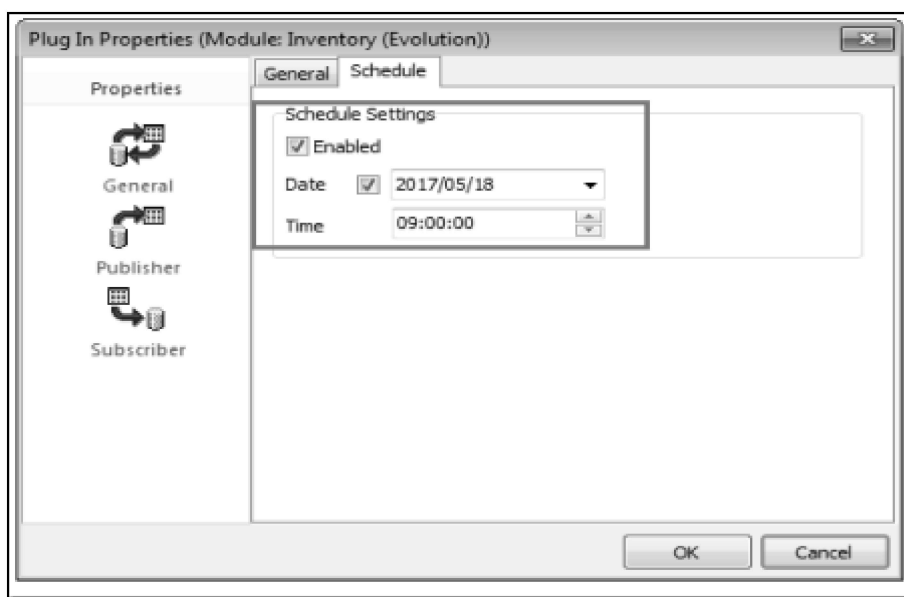

Description

This article explains how to enable scheduling settings in the Data Distribution Service (DDS) module for importing or exporting records in a specified frequency.

Resolution

The following steps explain how to resolve the abovementioned query:
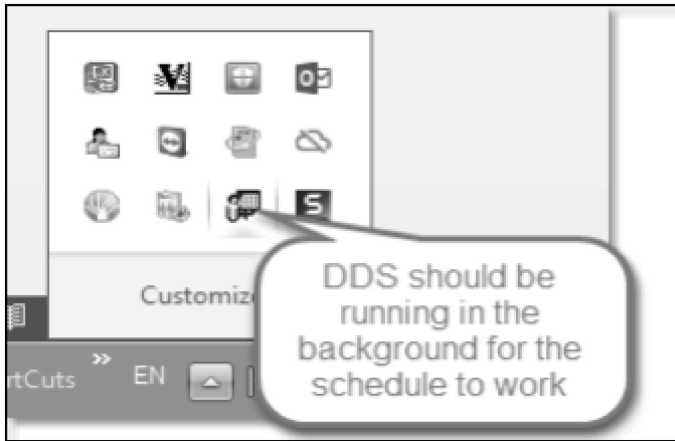

1. Find the C:\Program Files (x86)\Sage Evolution\ EvolutionDDS.exe file (usually on the Evolution server PC). Double click on it to run Sage Evolution Data Distribution Services

2. Once a process has been created under Properties enable the setting as below

3. Notice the Schedule and Enabled values below on the DDS screen

4. For this schedule to be used, the terminal using DDS should be running and DDS should also be open in the background
