

Sage ERP X3

New Enhancements Now Available

New enhancements are available as part of Sage ERP X3 v6.5 (Patch 26):

We are excited to announce the newest updates for Sage ERP X3. These updates are based on functionality requests from our customers—delivering ways to improve control, accuracy, and overall operational performance of their business.

The financial enhancements in Patch 26 deliver functionality to handle intercompany transactions within Sage ERP X3. These enhancements are must-have requirements for many mid-market customers in North America who operate multiple legal entities. The three new core financial features are designed to help our customers:

- **Increase efficiency and streamline the management of business transactions with recurring customer and supplier invoices.** Users are now able to define repeating accounts payable (AP) and accounts receivable (AR) invoices within Sage ERP X3 as well as facilitate the automated management of these transactions instead of having to create each document manually.
- **Improve productivity and consolidate business processes with intercompany customer and supplier invoices.** Through intercompany transactions within Sage ERP X3 a company is now able to share a supplier or customer invoice across multiple companies without manual data re-entry.
- **Remove the risk of data entry errors across different companies with intercompany general ledger (GL) journal entries.** A new function within Sage ERP X3 allows users to create journal entries that include financial sites from different companies as well as sets up the elimination accounts that will be used for intercompany AR/AP invoices and journal entries.

The latest product update for Sage ERP X3 Version 6.5 Patch 26 is available for download by logging onto the [Sage Customer Portal](#) using your credentials. For more information on the latest release please visit: www.SageERPX3.us/65release.
