

Version Release Cross-Reference

Sage 500 ERP

Globalization and branding efforts have resulted in branding changes leading to some confusion in identifying the correct naming conventions associated with releases across the years. The table below provides a cross-reference as an aide in clarifying the Release to Version relationships for Sage 500 ERP.

Major Release	Internal Version	Release Date
2018	7.90	March 2018
2017	7.80	February 2017
2016	7.70	December 2015
2014	7.60	December 2013
2013	7.50	November 2012
N/A	7.40	June 2011

Please note: Prior to the 2013 Release (release date November 2012), Sage used the Internal Version number solely to identify the release. Subsequent releases are identified by a year as a reminder to customers that the software in use may be outdated should the year appearing on the splash screen be previous to the current year.
